

Success story

Administration of car parks simplified.

Mobile service commitment with mQuest® and Intrexx

Since more than 25 years HUBER represents full-Service around car park applications. In order to digitalise and therefore optimise the operation and maintenance of car parks, HUBER has chosen a combination of the mobile app mQuest® and an individualized Intrexx platform solution. Service employees can register and document defects or maintenance work directly via mQuest® and

transfer it to the back office. With the portal appointments can be managed conveniently, maintenance work can be organised and documents can be administered. Service employees are notified automatically via mQuest® if a new order is available. Completed orders are then captured with mQuest® and synchronized with the Intrexx-Portal at the touch of a button. Super simple.

Deployed products: mQuest® and Intrexx

Registration of defects via digital forms and photo-documentation

Administration and mobile access to all construction documents and plans of a car park

Complete management of car parks via mQuest® in combination with Intrexx

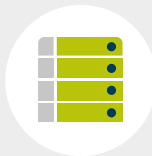

Services

Intrexx portal development

Continuous advancements

Hosting
