

Success story

Audit processes digitalised smart

Easy Audit with mQuest® Audit and an individual web portal

With more than 300 plants in 37 countries, Faurecia ranks among the largest and internationally leading suppliers of the automotive industry. In a pilot project at the Neuburg plant, an end-to-end digital process was introduced to improve the planning and execution of quality checks in the long term. A clever combination of the mQuest® app and an individual web-

based portal for analysis as well as reporting was introduced in collaboration with cluetec. Previously paper-driven and Excel-based processes are replaced reliably. The audits at the shop floor are carried out using tablets and digital forms. The evaluation happens via a centralised web portal with tailor made views for each user.

Deployed product: mQuest® Audit

Detailed auditing with tablets and digital forms according to individual standards

Individual web-based portal for analysis and evaluation

Cost and time savings through the replacement of paper and Excel-driven processes

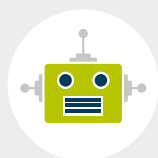

Increased result quality helps to use potential in production

Real-time synchronization of the data via WiFi

Services

Elaboration of the concept

Individual software development

Digitisation of forms

Hosting and support

cluetec's solution for the digitalisation of our audits convinced us all across the board. The consistently digital process for quality checks creates enormous time and cost savings for all parties involved – from suppliers to final customers.
